HINTS ON HOW TO BUILD WITH PLASTIC BUILDING BRICKS

FIG. 1 Start laying the foundation for the building using full size or large bricks as shown in the photographs. Lock together with the second layer and build upward while planning the size and location of openings for doors, windows, etc.

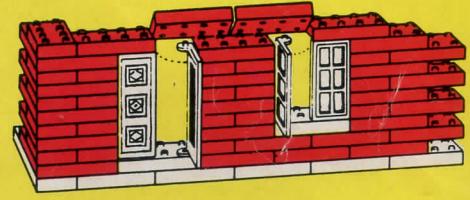

FIG. 2 Plastic Doors and Windows (lefts and rights) with pegs upwards and sockets downwards fit into sockets and pegs in bricks. Will hinge to open and close. May be snapped in or out after wall is constructed.

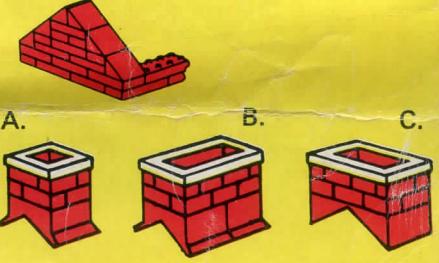

FIG. 3 Angle style bricks are used to construct the gable. Chimneys in three styles. "A" and "B" are built on one or two Chimney Bricks. "C" is made from angle bricks turned upside down, and full bricks with sockets up. All chimneys may be finished with chimney caps. Roof pieces are folded slightly to fit the gable or top of the building. Use either the colored or the white side upwards.

PLAN AND BUILD YOUR OWN CITY

Plastic Building Bricks are precision made and so simple and accurate that perfect results are obtained. After making a few models you will absorb the important traits of skillful planning and careful building.

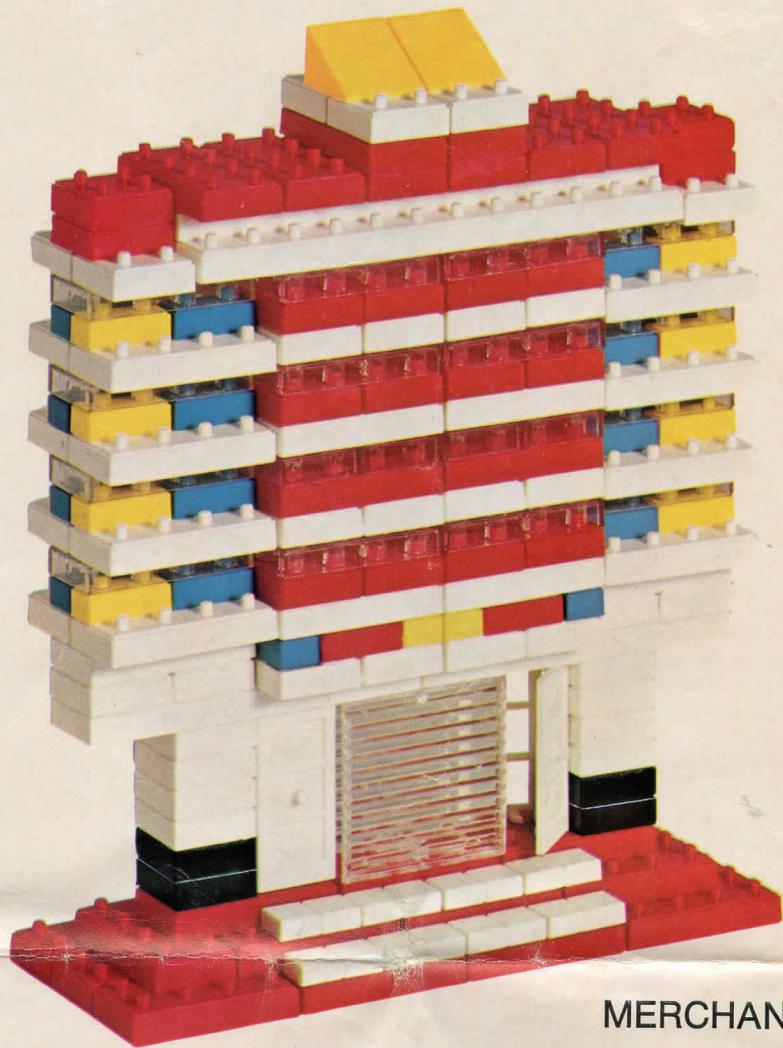

The fascination of these snap together bricks may fire your imagination as a builder. Perhaps you would like to build "Your Own City" or housing development.

In the development of such a project lies a fascinating training for the builder. As you advance you actually become a part of your own creations and proud of the results of your handicraft.

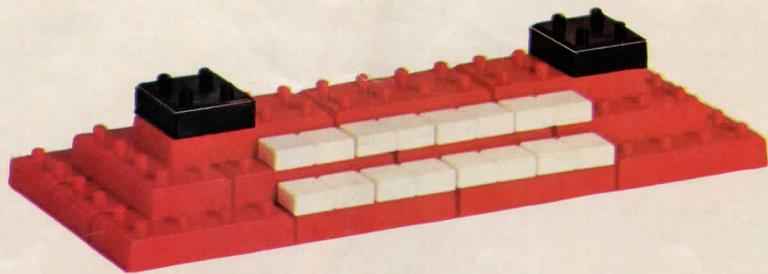

You introduce an interesting hobby for the entire family. As the city grows, other types of buildings suggest themselves soon to be followed by landscaping plans with roads, walks, trees, grass and lighting.

Plastic Building Bricks can be cemented together to make your buildings sturdy and permanent. They will last for years and are perfect for making model train and other mechanical toy installations more interesting and realistic.

Plastic Building Bricks are on sale in all toy departments throughout the nation. If your dealer (give us his name and address) cannot supply you with Plastic Building Bricks we will gladly tell you how and where to get them. Your inquiry will receive immediate attention.
